

Push Notification Sender

v1.0

What it Push Notification Sender?

- - - -

Push Notification Sender is a plugin that help you to send Push notification from any website using SiberianCMS API.

Quickstart

- - - -

To start using you will need 2 main things:

- 1- Upload Push Notification Sender on your server or your client server.
- 2- Create Siberian CMS API keys

How to upload files?

- - - -

To upload Push Notification Sender on your server you will need to use a FTP application like Filezilla or you can use your server control panel to upload the files.

How to create API keys in Siberian CMS?

- - - -

To create API keys, First, you will need to log in to your back office.

Then go to Manage > Users > API

The screenshot shows the 'Api Users' management interface. At the top, there is a navigation bar with the following items: MOBILE COMPANY, Dashboard, Manage, Appearance, Settings, and Messages. Below the navigation bar, the page title is 'Api Users'. Underneath, there is a section titled 'List of your users' with a '+' icon in the top right corner. A search bar is located below the title. Below the search bar, there is a table with the following columns: Id, User name, Firstname, Lastname, Created At, and Actions. The table contains one row with the following data: Id: 1, User name: dev@dev.com, Firstname: (empty), Lastname: (empty), Created At: May 22, 2018 8:06:1..., and Actions: (edit icon) (delete icon). In the bottom right corner, there is a version number: MAE - v4.13.19.

Id	User name	Firstname	Lastname	Created At	Actions
1	dev@dev.com			May 22, 2018 8:06:1...	

Click on **+** icon and enter the details, Make sure you grant access for Push notifications when you select the options.
